

Suitability/Risk List

	Suitability Factor	Suitable (Y/N)	Comments
1.	Does the sponsor/senior management understand and accept the DSDM philosophy?		
2.	Will the team members be empowered to make decisions on behalf of their communities?		
3.	Is there senior business commitment to provide end user involvement across the business?		
3a.	For B2C systems, is there a possibility of involving users from outside the organisation before full implementation?		
3b.	For B2B, has a business partner been identified who could provide a user view before implementation?		
3c.	For B2W, has a representative pool of users across the organisation been identified to act as Advisor Users?		
4.	Can the organisation accommodate the frequent delivery of increments?		
4a.	Can the type of system being developed accommodate the frequent delivery of increments?		
5.	Will it be possible for the developers to have access to the users throughout the project?		
6.	Will the development team remain the same throughout the project?		
7.	Will the development team have the appropriate skills?		
8.	Will the individual development teams consist of six people or less?		
9.	Is there a supportive commercial relationship?		
10.	Will the project use technology suitable for prototyping?		

11.	Is there a highly demonstrable user interface?		
12.	Is there clear ownership?		
13.	Will the development be computationally non-complex?		
14.	Can the solution be developed in increments if required?		
15.	Has the development a fixed timescale?		
16.	Can the requirements be prioritised?		
17.	Are the requirements not too detailed and fixed?		
18.	Is the organisation's vision for e-business and the resulting strategy in place and known to the project?		
19.	Has enough thought been given to the alignment of the project to the organisation's e-business strategy?		
20.	Is it the right time for this project?		
21.	For B2C projects, is there an approach to internationalisation in place?		
22.	Does a Style Guide exist? If not, will there be sufficient time in this project to create one?		
23.	If a Style Guide does exist, is it applicable to e-business projects?		
24.	Is the expected/existing technical architecture sound, e.g. good security, will handle the possible volumes of traffic, etc.?		
25.	For B2C projects, will the organisation and/or system be able to handle runaway success of the site?
